

Split! Restorative Cleaner is used as a first step in implementing a Non-Detergent Cleaning Program. It removes many layers of sticky detergent residue left from previous cleanings.

Split! Restorative Cleaner will clean a wide assortment of stubborn soils on surfaces not damaged by water including traffic patterns, food and beverage stains and grease and oil.

Dilute with cold water as follows: Mopping/Auto-scrubbing 2 oz. per gal. Bathroom and Kitchen floors 4 oz. per gal. Initial scrub-outs to remove detergent residue 12 to 16 oz. per gal. Heavy duty 12 to 16 oz. per gal.

Spray and wipe 4 oz. per gal. Heavy duty 12 to 16 oz. per gallon. Carpet and spotting 8 oz. per gal. Heavy Duty 12 to 16 oz. per gal. Spot test carpet first. Not for use on wool or natural fibers.

Split! Non-Detergent for daily use, is used as the second step in implementing a Non-Detergent Cleaning Program. Use when sticky residues have been removed with **Split! Restorative Cleaner**.

Split! Non-Detergent cleaner completely cleans without leaving residue behind. Grout doesn't darken and hold odors. Use on all hard surfaces, floors, horizontal and vertical surfaces that are water safe.

Dilute with cold water: Mopping/Auto-scrubbing 2 oz. per gal. Bathroom and Kitchen floors 4 oz. per gal. Extreme Heavy Duty 12 to 16 oz. per gal. Spray and Wipe 4 oz per gal. Extreme Heavy duty 12 to 16 oz. per gal.

Clean all touch points such as door edges and handles, telephones, drinking fountains and any areas that human hands will grab and touch consistently.

In a restroom you can use **Split!** to clean all surfaces including urinals and toilets. Having at your disposal a 10 quart or a split bucket system can speed up your cleaning.

Use the same **Split!** dilution ratio, dip your microfiber cleaning cloth or other cleaning tool into the bucket for harder to clean areas. (Be aware, for rust and other difficult hard water stains in toilets and urinals, you may still need an acid based bowl cleaner for the initial cleaning).

Odor caused by Bio-Film in the restrooms and other areas are caused by limited and poor cleaning, and using detergents that will leave residue, thus attracting more dirt and Bio-Film.

By removing the Bio-Film in restrooms and other areas, you will be left with no odor leaving and just the smell and look of a clean environment.
